Tools: Git, SVN, Expo, Firebase, Heroku, Netlify, Vercel, Postman, Yarn, Agile, Salesforce

EXPERIENCE

Apex Fintech Solutions Chicago, IL
Senior Software Engineer Jul 2024 – Present
Promoted from Software Engineer II in July 2026 in recognition of technical leadership

- Power Apex's Securities Lending program – a $100M+ revenue business across three product offerings spanning trading, contract management, inventory management, and revenue allocation
- Champion the migration of Apex Lend Plus and Stock Locates, two flagship Securities Lending products, to the cloud – applications traders use daily to manage contracts and inventory, surface insights, and act on recommendations
- Architect and deliver event-driven, cloud-native microservices on Google Cloud Platform (GCP), decommissioning legacy on-prem applications and re-platforming to Google Kubernetes Engine (GKE) and Cloud Run
- Mentor junior engineers and lead cross-domain initiatives across the engineering organization
- Pioneer AI-driven developer productivity tooling, building Claude agents and skills the team uses for code review, test generation, internal documentation, and cloud-migration acceleration
- Drive a quality-first engineering culture through comprehensive code review, testing standards, and release management practices that minimize production change failures
- *Technologies Used:* Go, React, TypeScript, C#, gRPC, GCP, GKE, Cloud Run, SQL, Pub/Sub

Epic Systems Verona, WI
Full-Stack Software Engineer Aug 2022 – Jul 2024

- Spearheaded multiple projects for Epic's Dermatology Application, owning all aspects from design and end-user interviews to full-stack development and post-implementation usability testing
- Developed full-stack solutions to help dermatologists document patients' skin conditions
- Supported the company-wide move from SVN to Git
- *Technologies Used:* React, TypeScript, C#, .NET, Caché

YOKE South Bend, IN
Software Engineer Aug 2021– Dec 2021

- Built features to enhance the way athletes maximize their name, image, and likeness
- *Technologies Used:* React, TypeScript

PROJECTS

Pixel Dash – Hardware + Cloud Smart Display 2026 – Present

- Designing and building an end-to-end smart display product: custom C++ firmware for a RGB LED matrix panel, backed by a TypeScript/Express API on Cloud Run
- Delivering a configurable set of live widgets – weather, real-time transit, sports scores and standings, and more – tailored to each user's preferences
- *Technologies Used:* TypeScript, Express, Google Cloud Run, SQL, C++ (Platform IO)
